Waste Minimization

Clean Harbors Services, Inc., (CHSI) is a treatment, storage, and disposal facility for a variety of hazardous wastes. Quantities of hazardous wastes are consolidated prior to treatment and disposal at off-site facilities. Clean Harbors Services, Inc. does not actually produce the hazardous wastes that are accepted or shipped from the facility, but CHSI is considered to be "generator" of any hazardous waste that undergoes consolidation at the facility.

For the purposes of waste minimization, CHSI undertakes the following measures:

- (a). Bulking of similar solid and liquid wastes;
- (b). Segregating non-regulated, non-hazardous wastes from hazardous wastes;
- (c). Crushing and shredding empty drums to reduce the actual volume of hazardous waste solids requiring landfilling;
- (d). Efficiently packing smaller containers within a transport drum or DOT shipping box as to maximize the quantity of wastes per shipping container while minimizing the quantity of non-hazardous solids (absorbents) needed to fill any unused capacity and;
- (e). Controlling the quantity of absorbent material applied to spilled liquids in order to minimize the resultant quantity of contaminated solids requiring disposal.

In addition to these source reduction measures, it is CHSI's policy to identify and utilize, where technically feasible and economically advantageous, waste treatment and recycling options to detoxify and or reuse hazardous wastes to the maximum extent practical.
